SUMMARY

- I am a developer who cares deeply about the user experience. My goal is to join a product team where I can use both my frontend eye and backend logic to build features that actually make people's lives easier.
- I am looking for a full-stack position in an environment that values mentorship and open communication. I enjoy breaking down complex technical problems and turning them into reliable, well-tested applications.

SKILLS

- Frontend Setup : Html, CSS, JavaScript/Typescript and jQuery
- Frontend Frameworks : React.js
- Frontend Styling : Bootstrap CSS, Tailwind CSS
- Backend Languages : Python, PHP
- Backend Runtime and Frameworks : Node.js, Django/Flask (Python)
- Database MainSQL : PostgreSQL, MySQL, SQLite
- Database NoSQL : MongoDB
- API's : RESTful Architecture
- Version Control: Git/GitHub/GitLab
- Containers: Docker, Kubernetes
- Cloud: AWS, Azure, or Google Cloud Platform

WORK EXPERIENCE

FREELANCE

July 2025 - July 2026

- Managed client communication, scope revisions, and deadlines independently, maintaining a 90%+ on-time delivery rate across multiple projects.
- Authored comprehensive technical documentation for a blockchain-based payment platform used by 50K+ monthly active users.
- Architected custom web platforms from scratch, helping non-technical founders launch fully functional minimum viable products (MVPs) on time and within budget.

LANGUAGES

- English (Native)
- French (A2)

TECH CONTENT WRITER (FRONT-END)

Ribdo | June 2024 - July 2025

- Researched emerging web technologies to produce thought leadership content that increased client website traffic by 25%.
- Authored comprehensive technical documentation for a blockchain-based payment platform used by 50K+ monthly active users.
- Lead content strategy for major tech features, simplifying complex developer concepts into engaging, highly shareable long-form content.
- Developed and delivered technical content for SaaS and fintech clients, translating complex engineering concepts into accessible documentation and blog posts.

FULLSTACK DEVELOPER

Topical | March 2023 - May 2024

- Refactored some legacy codebases, reducing average page load time by 30% through database query optimization and lazy loading.
- Implemented RESTful APIs and integrated third-party services that improved application functionality and user engagement.
- Built core features for the main platform, improving overall application load times by 25% and enhancing user retention.
- I migrated legacy jQuery code to modern React + TypeScript, which improved maintainability and reduced bugs by 50%.
- Designed and integrated custom backend endpoints, expanding application functionality and significantly reducing client-side API response delays.

BACKEND DEVELOPER

Chuka's Enterprise | Jan 2022 - Feb 2023

- Created custom CLI tools to automate routine reporting tasks, saving the operations team more than 5 hours per week.
- Wrote unit tests and debugged production issues, improving system stability and reducing critical bug reports by 20%.
- Scaled system to handle 10x traffic by Re-architecting database queries and adding indexing + read replicas which then allowed it to support 500K requests/day.
- Built and maintained core server-side logic using Python and Flask/Django frameworks.
- Integrated third-party services like payment gateways and email providers, enabling new revenue features to launch 3 weeks ahead of schedule.

EDUCATION

ELECTRICAL PHYSICS

Federal University of Technology, Owerri | 2018 - 2024

PROJECTS

TALENTBRIDGE

https://github.com/Frankez75/talentbridge

A platform where artists, craftsmen, inventors and creative minds with works that are excellent but unseen can showcase what they've built or created and also connect with interested buyers, investors and businesses.

BEACON

https://github.com/Frankez75/beacon

A platform focused on providing business directory solutions of all kinds, this is a platform where people can find different kinds of businesses or the best place around any area for any kind of service. Search and filter by location, rating, services and more.

MERCHANTHQ

https://github.com/Frankez75/MerchantHQ

A dynamic platform where you can find what you need and sell what you don't. Using this platform is the simplest way to discover great deals and list your items for sale.
